

Global Academy of Technology, Bengaluru

Internal Test No: 1st IA

Date	0	6	0	3	2	5	Semester	4 th	U	S	N								
Subject Name	UX/UI							Subject Code	I	S	E	2	3	4	0	7	C		

Time: 45 Mins. **Max. Marks: 50**

Note:

1. Answer all the fifty questions, each question carries one mark.
2. For each question write one option and answer among four options. Ex: b) Answer.
3. writing more than one option/answer for the same question makes the answer invalid.
4. Damaging/overwriting, using whiteners on the sheet is strictly prohibited.

1. Which field of study is user interface design a subset of?

- | | |
|-------------------------------------|----------------------------|
| a) Software Engineering | c) Computer Graphics |
| b) Human-Computer Interaction (HCI) | d) Artificial Intelligence |

2. What are the two primary components of a user interface?

- | | |
|--------------------------|-----------------------------|
| a) Hardware and Software | c) Design and Functionality |
| b) Input and Output | d) Text and Graphics |

3. What is the primary goal of human-computer interaction?

- | | |
|--|---|
| a) To create visually appealing interfaces | c) To maximize computer processing speed |
| b) To study how people and computers work together effectively | d) To minimize the cost of software development |

4. What does the user interface enable users to do?

- | | |
|---|--------------------------------|
| a) Control the computer's hardware directly | c) Modify the operating system |
| b) Communicate needs to the system and receive processing results | d) Access the internet |

5. What is the key characteristic of the best user interface?

- | | |
|---------------------------------------|---|
| a) Complex design with many features | c) Proper design with effective input and output mechanisms |
| b) Simple design with minimal options | d) A visually stunning appearance |

6. What is a critical role of a well-designed interface for users?

- | | |
|--|-------------------------------------|
| a) To provide access to advanced system settings | c) To display system error messages |
| b) To serve as a window to the system's capabilities and a vehicle for complex tasks | d) To manage network connections |

7. What is a potential consequence of a confusing and inefficient interface?

- | | |
|--------------------------------|---|
| a) Increased user satisfaction | c) Greater difficulty in doing jobs and more mistakes |
| b) Improved system performance | d) Reduced training costs |

8. What can poor UI design lead to?
 - a) Increased user engagement
 - b) Aggravation, frustration, and increased stress
 - c) Higher employee morale
 - d) Better customer service
9. Which field of study is user interface design a subset of?
 - a) Software Engineering
 - b) Human-Computer Interaction (HCI)
 - c) Computer Graphics
 - d) Artificial Intelligence
10. What are the two primary components of a user interface?
 - a) Hardware and Software
 - b) Input and Output
 - c) Design and Functionality
 - d) Text and Graphics
11. What is the primary goal of human-computer interaction?
 - a) To create visually appealing interfaces
 - b) To study how people and computers work together effectively
 - c) To maximize computer processing speed
 - d) To minimize the cost of software development
12. What does the user interface enable users to do?
 - a) Control the computer's hardware directly
 - b) Communicate needs to the system and receive processing results
 - c) Modify the operating system
 - d) Access the internet
13. What is the key characteristic of the best user interface?
 - a) Complex design with many features
 - b) Simple design with minimal options
 - c) Proper design with effective input and output mechanisms
 - d) A visually stunning appearance
14. What is a critical role of a well-designed interface for users?
 - a) To provide access to advanced system settings
 - b) To serve as a window to the system's capabilities and a vehicle for complex tasks
 - c) To display system error messages
 - d) To manage network connections
15. What is a potential consequence of a confusing and inefficient interface?
 - a) Increased user satisfaction
 - b) Improved system performance
 - c) Greater difficulty in doing jobs and more mistakes
 - d) Reduced training costs
16. What can poor UI design lead to?
 - a) Increased user engagement
 - b) Aggravation, frustration, and increased stress
 - c) Higher employee morale
 - d) Better customer service

17. What was the approximate reduction in decision-making time achieved by reformatting inquiry screens following good design principles?
- a) 10 percent
 - b) 20 percent
 - c) 40 percent
 - d) 60 percent
18. What is one of the benefits of good design for an organization's customers?
- a) Higher prices
 - b) Improved service
 - c) Reduced product quality
 - d) Less personalized attention
19. What impact does good screen design have on employee satisfaction?
- a) Decreases employee satisfaction
 - b) Increases aggravation and frustration
 - c) Increases employee satisfaction
 - d) No impact on employee satisfaction
20. How does good UI design affect support line costs?
- a) Support line costs are increased due to complexity.
 - b) Support line costs are lowered because fewer assist calls are necessary.
 - c) Support line costs remain the same.
 - d) Support line costs become unpredictable.
21. How do graphics enhance the user interface compared to text-based systems?
- a) By assuming a one-dimensional look
 - b) By assuming a three-dimensional look
 - c) By reducing computer power
 - d) By slowing down user actions
22. What is a key advantage of using graphics in a user interface?
- a) Increased mental and perceptual load
 - b) Reduced information transfer
 - c) Reduction in mental and perceptual load and increased information transfer
 - d) Limited visual comparisons
23. What is the concept of direct manipulation in graphical systems?
- a) Using complex commands to interact with the system
 - b) Portraying the system as an extension of the real world
 - c) Hiding objects and actions from the user
 - d) Making actions slow and difficult to reverse
24. What characteristic did Nelson (1980) describe as "virtual reality"?
- a) A complex system interface
 - b) A representation of reality that can be manipulated
 - c) A purely text-based system
 - d) An abstract data model
25. What does "WYSIWYG" stand for?
- a) What you see is what you get
 - b) What you select is what you grab
 - c) What you save is what you get
 - d) What you send is what you get

26. In direct manipulation, how are the results of actions displayed?
- a) Through complex code outputs
 - b) Visually on the screen in their new and current form
 - c) Only through auditory feedback
 - d) Only after a significant delay
27. What is a key benefit of incremental actions in direct manipulation?
- a) They are difficult to reverse.
 - b) They require advanced technical skills.
 - c) They are continuous and effortless.
 - d) They are hidden from the user
28. What happens if an action is discovered to be incorrect in a direct manipulation system?
- a) The system crashes.
 - b) The action can be easily undone.
 - c) The user must restart the entire process.
 - d) The action is irreversible
29. What is the term for substituting words and text for symbols in a user interface?
- a) Direct Manipulation
 - b) Indirect Manipulation
 - c) Virtual Reality
 - d) Transparency
30. Which is NOT a reason to use Indirect Manipulation?
- a) The operation may be difficult to conceptualize in the graphical system
 - b) It may be difficult for people to learn and remember all the necessary operations and actions.
 - c) The operation is easier to perform using symbols.
 - d) The amount of space available for placing manipulation controls in the window border may be limited.
31. According to Gould, which of the following is a general observation about design?
- a) Development is always predictable.
 - b) Nobody ever gets it right the first time.
 - c) Change is unnecessary in good design.
 - d) User mistakes can always be eliminated.
32. Gould suggests that designers need:
- a) Unlimited resources.
 - b) Good tools.
 - c) To ignore user feedback.
 - d) To avoid change.
33. Which of the following is a common pitfall in the UI design process?
- a) Early analysis of user needs
 - b) Creation of design element prototypes
 - c) No usability testing
 - d) A clear design team vision
34. A focus on using "neat" or "glitzy" design features can be a pitfall because it may lack:
- a) Visual appeal.
 - b) User focus.
 - c) Technical sophistication.
 - d) Cost-effectiveness.
35. What can result from poor communication between members of the development team?
- a) Improved design consistency
 - b) Design shortcuts
 - c) Inefficient feedback
 - d) Ineffective integration

36. What is the primary focus when gaining a complete understanding of users and their tasks?
- a) Developer preferences
 - b) Technological innovation
 - c) People's needs
 - d) Market trends
37. Why is it important to solicit early and ongoing user involvement in the design process?
- a) To reduce development costs.
 - b) To limit the features of the system.
 - c) To confront resistance to change and understand user needs.
 - d) To increase complexity.
38. What is the goal of rapid prototyping and testing?
- a) To delay product release.
 - b) To quickly identify and develop solutions to problems.
 - c) To increase development costs.
 - d) To ignore user feedback.
39. Why is it harder and more costly to fix a product after its release?
- a) Because users are more forgiving of early issues.
 - b) Because it is easier to change code before release.
 - c) Because the design is already finalized.
 - d) Because testing is more thorough after release
40. What does integrating the design of all system components ensure?
- a) That each component is developed independently.
 - b) That all elements of the system work together cohesively.
 - c) That software is prioritized over documentation.
 - d) that training needs are ignored
41. How is "usability" defined?
- a) The visual appeal of a system
 - b) The ease and effectiveness with which humans can use a system
 - c) The complexity of a system
 - d) The cost of developing a system
42. What is the focus of a "specified level of subjective assessment" in the context of usability?
- a) Technical performance
 - b) User comfort and satisfaction
 - c) Development costs
 - d) Market demand
43. How does Mandel describe common usability problems?
- a) System speed
 - b) User fatigue
 - c) Difficult menus and error messages
 - d) The number of features
44. According to Mandel, what is a sign of a common usability problem in graphical systems?
- a) User satisfaction
 - b) Clear and concise menus
 - c) Ambiguous menus and icons
 - d) Efficient input mechanisms

45. What is the effect of inadequate feedback and confirmation within a system?
- a) Increased user satisfaction
 - b) Faster task completion
 - c) Decreased user trust
 - d) Improved system performance
46. What does the effectiveness of an interface refer to?
- a) The cost of development
 - b) The ability to accomplish required tasks with speed and accuracy
 - c) The visual appeal of the system
 - d) The number of features
47. What does the learnability of an interface refer to?
- a) The system's processing speed
 - b) The time and training required for users to become proficient
 - c) The system's cost-effectiveness
 - d) The number of support staff needed
48. What does the flexibility of an interface refer to?
- a) The number of features available
 - b) The ability to adapt to variations in tasks and environments
 - c) The system's security measures
 - d) The ease of upgrading the system
49. How are user attitudes measured in usability assessments?
- a) Through technical performance metrics
 - b) Through levels of tiredness, discomfort, frustration, and satisfaction
 - c) Through system cost analysis
 - d) Through the number of support calls
50. Which criterion reflects the goal of user satisfaction in Shackel's usability measures?
- a) Minimal support required
 - b) High system performance
 - c) Continued and enhanced system usage
 - d) Low error rates
